

AMENDMENTS TO THE SPECIFICATION

Page 1, delete the last full paragraph and insert the following paragraph:

In such a state, when the rotator winding 102 is rotated and driven due to rotation of an engine, ~~not~~^{now} shown, voltage is induced to an armature winding (also referred to as a rotator winding) of three-phase star connection. Power generation output therefrom charges the battery 104 via a three-phase full-wave rectifier 103, while an excitation current flows from an auxiliary rectifier 107 to the field winding 102.
